#### 1. INTRODUCTION

#### 1.1 Project Overview:

To provide the right and plenty of opportunities to the fresher's and experienced candidates. We have come up with a skill recommender solution through which the fresher orthe skilled person can register, log in, and find jobs with our help according to their ability, skill level, and knowledge. In this process, we are going to help them in both a human- centered way and by using technology. Further will be discussed below.

#### 1.2 Purpose:

To provide equal and appropriate job/skill recommendations to all the people with their ability, skill level, and knowledge consideration. We are not going to filter the candidates based on our machine-analyzed data that the candidate entered in the resume or wherever. Because we found that many peoples said they are not getting the right recommendations for jobs and skill enhancement courses. So, we are approaching this problem in a more human-centric way to get the data, processing, and recommend skills and jobs. We are merging both technology and human in the right proportion to solve the real human problem.

#### 2. LITERATURE SURVEY

#### 2.1 Existing Problem:

How might we recommend jobs for people's specific skills or interests and vice-versa? In the job searching world, Job description's explanation, advertising, and selection criteria aren't the same during college and after college. It is entirely different. People are facing many practical issues when they searching jobs after their college days. As we are going to provide a different kind of job description alone will create a positive hopeful impact for fresher as well as experienced candidates. By this, we can satisfy both the fresher and experienced candidates who are all searching for jobs. As we are going to find the skills of the people through both the direct and indirect approach, we are able to get and find the right skill level for the people. In addition, we can get more insights about them. This creates a more positive impact and customer satisfaction in using our service and this is the existing problem to solve.

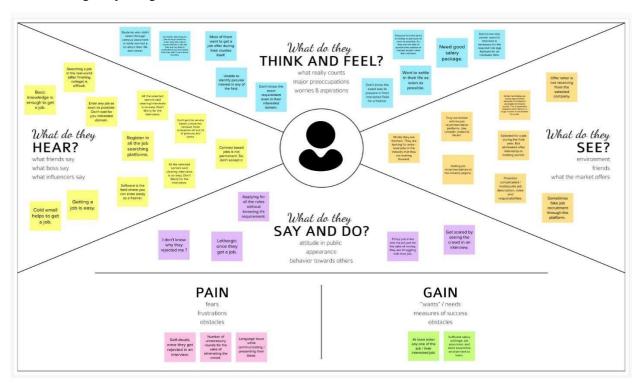

# 2.2 References:

S.NO	TITLE	AUTHOR &	DESCRIPTION	OUR LEARNINGS
		YEAR		
1.	Job Recommendation System Using Profile Matching and Web Crawling	Deepali V Musale, Mamta K Nagpure, Kaumudini S Patil, Rukhsar F Sayyed May 2016.	The first type of recommendation is done through web portal by using keyword based search and second type of recommendation is done through profile matching and sending notification to the students. Thus proper job recommendations are provided to the students.	<ol> <li>They use the more logical wayapproach.</li> <li>Getting completely detailed infromation         <ul> <li>Compare profiles -</li> <li>Recommendation.</li> </ul> </li> </ol>
2.	Enhanced Job Recommendation System.	Shivraj Hulbatte, Amit Wabale, Suraj Patil, Nikhilkumar Sathe Oct 2018	On the basis of this study, research and after implementation of algorithms, the collaborative filtering based algorithm is considered for its better performance and overall factors. Of course a lot of improvement and hybrid algorithms need to be implemented alongside collaborative filtering algorithms.	1. Started with similarapproach that wehave now for recommendation, but ended up withthe statements of default sayings.

#### 3. IDEATION & PROPOSED SOLUTION

# 3.1 Empathy Map Canvas:

# 3.2 Ideation & Brainstorming:

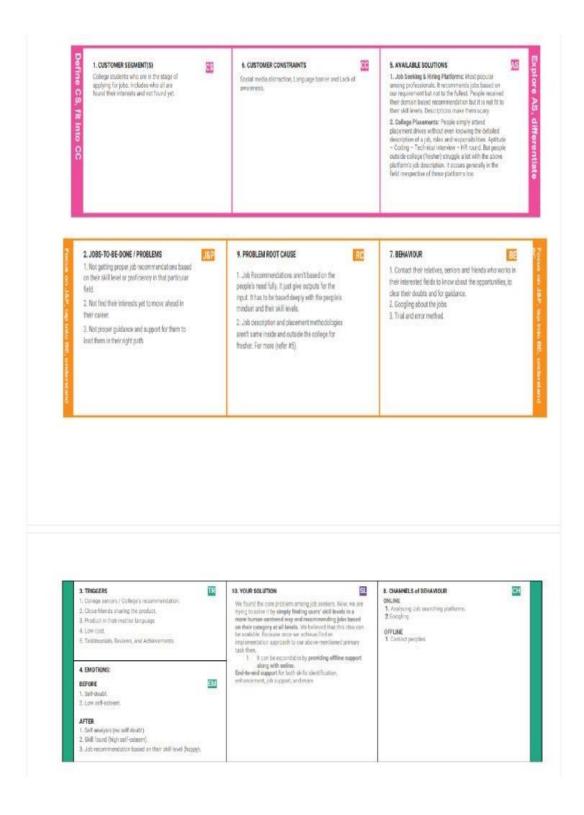

# 3.3 Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	How might we recommend jobs for people's specific skills or interests and vice-versa?
2.	Idea / Solution description	Specific public campaigns for grouping people based on their skills, Asking recruiters not to put detailed descriptions and asking them to put the skills they want. Based on userrequests, show the job vacancies that mostly match with user skills.
3.	Novelty / Uniqueness	We are not going to filter the candidates based on our machine-analyzed data that the candidate entered in the resume or wherever. Because we found that many people said they are not getting the right recommendations for jobs and skill enhancement courses. So, we are approaching this problem in a more human-centric way to get the data, processing, and recommend skills and jobs. We are merging both technology and human in the right proportion to solve the real problem.

4.	Social Impact / Customer Satisfaction	Job description explanation, advertising, and selection criteria aren't the same during college and after college. It is entirely different. People are facing many practical issues when they searching jobs after their college days. As we are going to provide a different kind of job description alone will create a positive hopeful impact for fresher as well as for experienced candidates. Bythis, we can satisfy both the fresher and experienced candidates who are all searching for jobs. As we are going to find the skills of the people through both the direct and indirect approach, we are able to get and findthe right skill level for the people. In addition, we can get more insights about them. This creates a more positive impact and customer satisfaction in using our service.
5.	Business Model (Revenue Model)	<ol> <li>Advertisement commissions by allowing skill development companies and job-providing agencies to promote their business to reach their potential users.</li> <li>Premium services like mentor support, exclusive courses, etc</li> </ol>
6.	Scalability of the Solution	We found the core problem among job seekers. Now, we are trying to solve it by simply finding users' skill levels in a more human-centered way and recommending jobs based on their category at all levels. We believed that this idea can be scalable. Because once we achieve/find an implementation approach to our above-mentioned primary task then,  1. It can be expandable by providing offline support along with online.  2. End-to-end support for both skills identification, enhancement, job support, and more.

#### 3.4 Problem Solution Fit:

#### 3.5 Solution Architecture:

- Contact HRs of different companies in wide variety of fields & gather the recruitment description in a more digestible way for freshers & intermediates.
- As usual for experienced candidates.

Database (both jobs & candidates info) Our Website (The Job Junction)

For Front-end

For back-end & database

Mostly go with IBM's tech stack we are learning. Considering PHP and MySQL too. So, discussing on that.

• User's info collected through our website.

- Verified and found their skill levels through oneone interaction.
- Update their details.

Premium Services based on user's need

# 4. REQUIREMENT ANALYSIS

# **4.1 Functional Requirement**

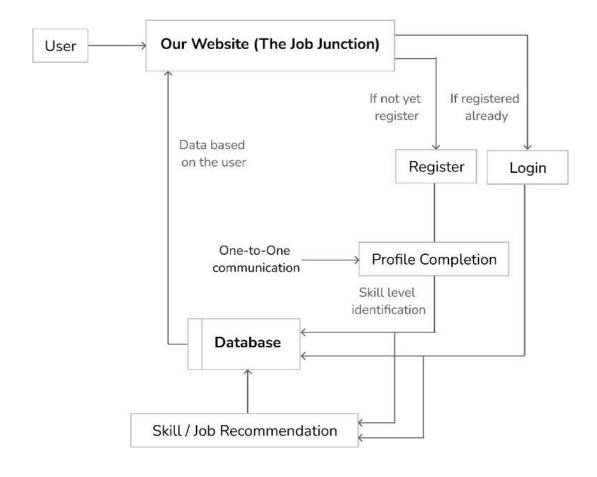

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration via Form on our website.
FR-2	Profile Completion	User will create their profile with their basic personal details, we will call them in person to know their educational background, skill levels, andtheir goals to provide them with better service. The gathered details will be stored and displayed in their profile section.
FR-3	User Login	Users can log in with either their Email or Phone number.
FR-4	Job / Skill Recommendation	Based on their profile, we will recommend them appropriate jobs with courses to learn if needed. Will be notified through Email and Our Website.

# **4.2 Non-Functional Requirement**

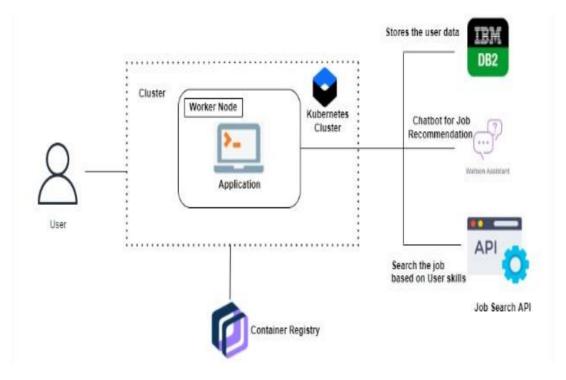

FR No.	Non-Functional Requirement	Description		
NFR-1	Usability	Right now, we are focusing on the target users (fresher and college students) without any special considerations. We will definitely make it usable for all kinds of people in the future.		
NFR-2	Security	Basic form validations will be performed to avoid harmful injections and also to get meaningful information.		
NFR-3	Reliability	We are planning to serve 1000 users at a time in the initial stages.		
NFR-4	Performance	Mobile responsive website.		
NFR-5	Availability	Planning to provide customer support during office hours 9-5.		
NFR-6	Scalability	In addition to this, we can provide career guidance programs, job fairs, native language support, and premium services like personalized mentoring, coaching, and so on in the future.		

# 5. PROJECT DESIGN

# **5.1 Data Flow Diagrams**

# **5.2 Solution & Technology Architecture**

**Table-1: Components & Technologies:** 

S.No	Component	Description	Technology
1.	User Interface	Front-end of our platform was	HTML, CSS (flexbox)
		Developed using these	and JavaScript
		technologies.	
2.	Application Logic-1	Displaying the web pages	Python
		Based on the criteria.	
3.	User Onboarding	Welcoming users inside the	IBM Watson Assistant
		website using IBM Watson	
		Assistant.	
4.	Database	Queries for fetching the	MySQL.
		required details.	
5.	Cloud Database	Database Service on Cloud	IBM DB2.
6.	File Storage	File storage requirements	IBM Block Storage.
7.	Infrastructure (Server /	Application Deployment.	Kubernetes.
	Cloud)		

**Table-2: Application Characteristics:** 

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Website developed using These open-source frameworks.	Flask and Bootstrap
2.	Security Implementations	To ensure the valid details are getting from the user.	Input validations and encryption of user's data.
3.	Scalable Architecture	Can be easily scalable, as we are dealing with IBM technologies for implementing our solutions.	Assistant, and
4.	Availability	Justify the availability of applications (e.g. use of load balancers, distributed servers, etc.)	None
5.	Performance	By writing optimized code and different techniques, we are trying to provide better and faster performance.	None

# 5.3 User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user & Web user)	Registration	USN-1	As a user, I can register for the application by entering my name, email, phone number, and password.	I can access to complete my profile.	High	Sprint-1
		USN-2	As a user, I can register through Chatbot.	I can access to complete my profile.	Low	Sprint-4
	Login	USN-1	As a user, I can log into the application by entering email & password.	I can access to see job openings for my skill levels.	High	Sprint-1
	Notification	USN-1	As a registered user, I can get notification for jobs / courses recommendations based on my skills through calls and whatsapp.	I can apply for the jobs or learn the recommended courses.	High	Sprint-2
		USN-2	As a registered user, I can get notification for jobs / courses recommendation through Email.	I can apply for the jobs or learn the recommended courses.	Medium	Sprint-3
	Recommendation	USN-1	As a user, I can view job recommendations or courses to improve myself in the website.	I can apply for jobs or learn skills based on the recommendation.	High	Sprint-1
Customer Care Executive	Contact registered users	CCESN-1	As a customer care executive, I can talk to the registered users to know their skill levels and their interest.	I can complete their profile for job / skill recommendations.	High	Sprint-1
Administrator	Monitoring the user on boarding	ASN-1	As an administrator, I monitor whether a user complete his profile once he registered.	I can make sure each and every user has a complete profile for further processes.	High	Sprint-1

# **6.PROJECT PLANNING**

# **6.1 Sprint Planning & Estimation**

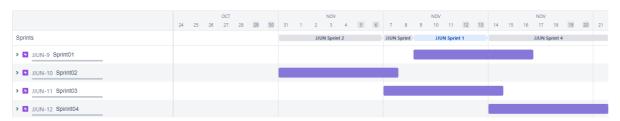

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Team Members
Sprint-1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sakthivel Sathish
Sprint-1		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sanjay kumar Swathi
Sprint-2		USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sakthivel Swathi
Sprint-3		USN-4	As a user, I can register for the application through Gmail	I can receive confirmation email & click confirm	Medium	Sakthivel Swathi
Sprint-2	Login	USN-5	As a user, I can log into the application by entering email & password	I can access my account / dashboard	High	Sakthivel
Sprint-2	Dashboard	USN-6	Create a model set that contains those models, then assign it to a role.	Assign that group to the appropriate roles on the Roles page	High	Swathi Sathish
Sprint-4	Identity-Aware	USN-7	Open, public access, User- authenticated access, Employee- restricted access.	Company public website. App running on the company intranet. App with access to customer private information.	High	Sakthivel Swathi
Sprint-1	Communication	USN-8	A customer care executive is a professional responsible for communicating the how's and why's regarding service expectations within a company.	For how to tackle customer queries.	Medium	Sathish Sanjay kumar
Sprint-3	Device management	USN-9	You can Delete/Disable/Enable devices in Azure Active Directory but you cannot Add/Remove Users in the directory.	Ease of use.	Medium	Sakthivel Swathi

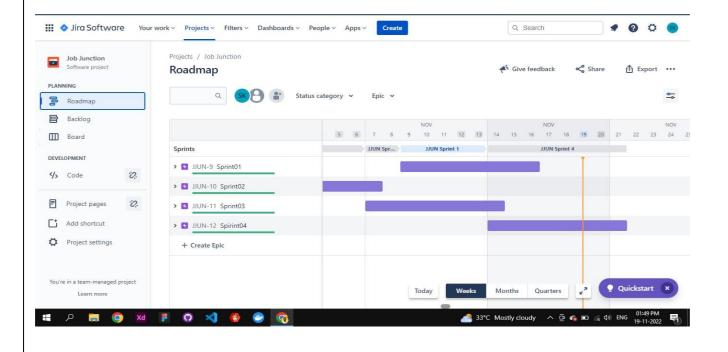

#### **6.2 Sprint Delivery Schedule**

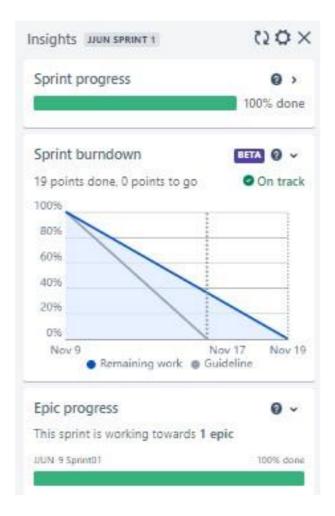

# Project Tracker, Velocity & <u>Burndown</u> Chart: (4 Marks)

**						
Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	19	6 Days	24 Oct 2022	29 Oct 2022	19	16 Nov 2022
Sprint-2	01	6 Days	31 Oct 2022	05 Nov 2022	01	17 Nov 2022
Sprint-3	01	6 Days	07 Nov 2022	12 Nov 2022	01	18 Nov 2022
Sprint-4	01	6 Days	14 Nov 2022	19 Nov 2022	01	19 Nov 2022

#### Reports from JIRA

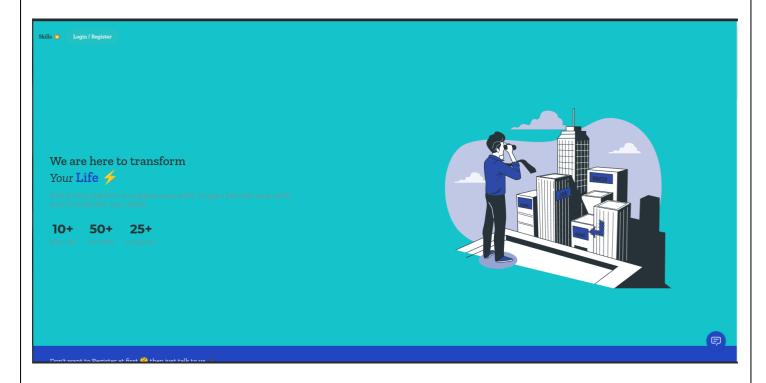

#### 7.CODING & SOLUTIONING

#### 7.1 Chatbot Integration Code

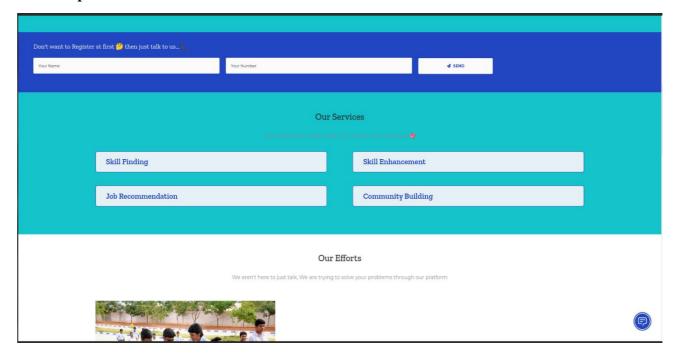

#### Code

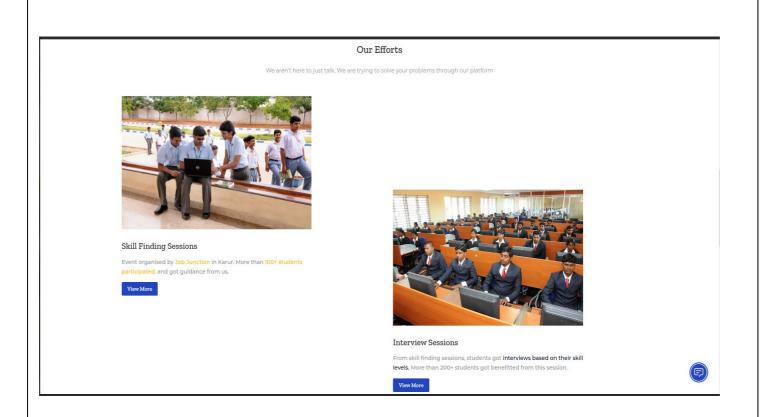

```
<script>
 window.watsonAssistantChatOptions = {
  integrationID: "c9539449-0fd4-4aca-8b8b-3a6c109a71fa", // The ID of this integration.
  region: "jp-tok", // The region your integration is hosted in.
  serviceInstanceID: "39284af4-f9b4-4159-be01-8ca534e21855", // The ID of your service
instance.
  onLoad: function(instance) { instance.render(); }
 };
 setTimeout(function(){
  const t=document.createElement('script');
  t.src="https://web-chat.global.assistant.watson.appdomain.cloud/versions/" +
(window.watsonAssistantChatOptions.clientVersion || 'latest') +
"/WatsonAssistantChatEntry.js";
  document.head.appendChild(t);
 });
</script>
```

#### 7.2 FLASH FRAMEWORK

#### Responsive Website

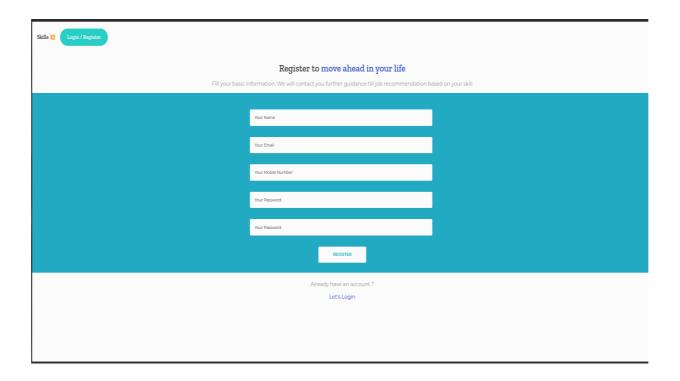

# **Desktop View**

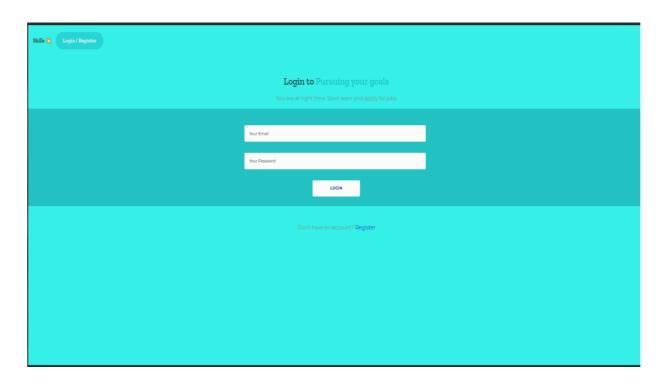

# **Dynamic Application**

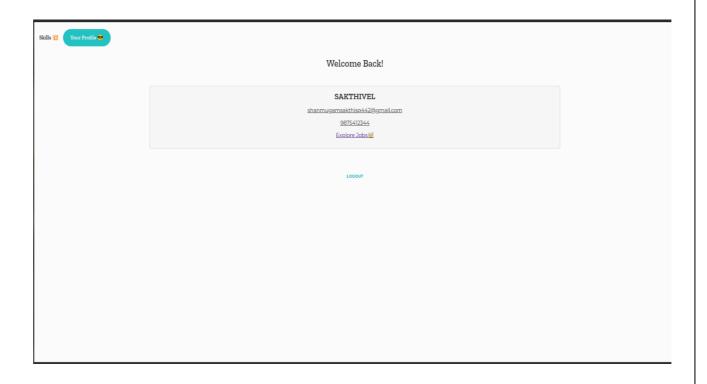

# **Registration Form**

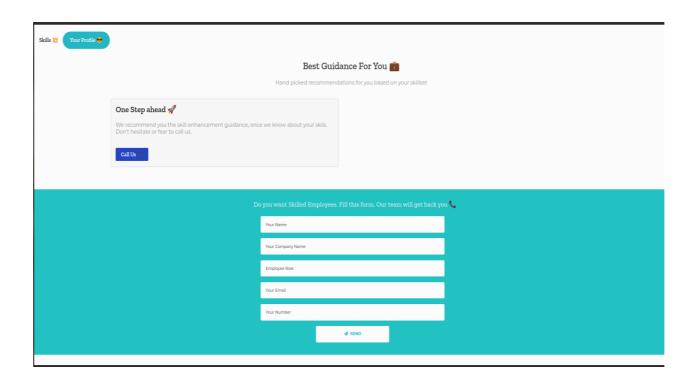

# **Login After Registration**

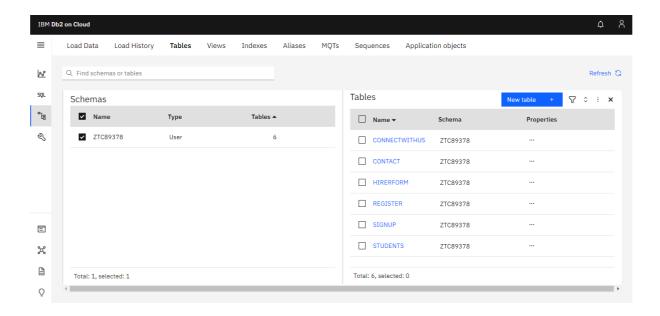

# **Profile After Login**

# **Jobs After Login**

#### 7.3 Database Schema

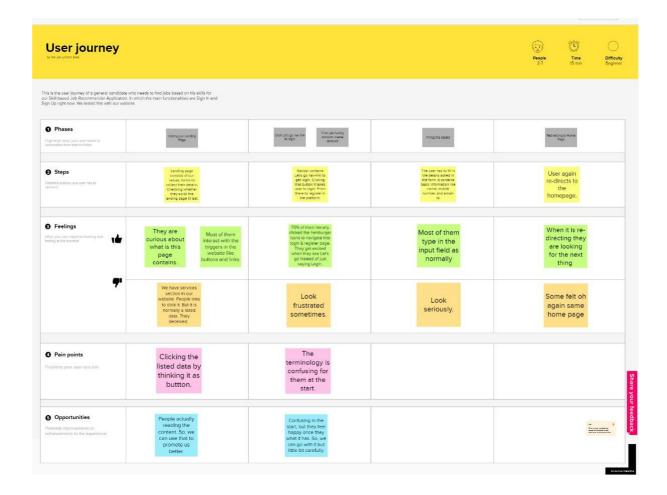

#### 8.TESTING

#### 8.1 TEST CASES

- **1. Website functionality testing :** It includes Outbound links, Internal links correctness, There are no links leading to the same page, There are no broken links.
- **2.Usability testing :** It includes Navigation testing and Content testing.
- **3.UI** (User Interface) testing: It includes Testing with different screen resolutions and Design elements evaluation: layout, colors, fonts, font sizes, labels, text boxes, text formatting, captions, buttons, lists, icons, and links.
- **4.Performance testing :** This is carried out by Lighthouse in the browser.

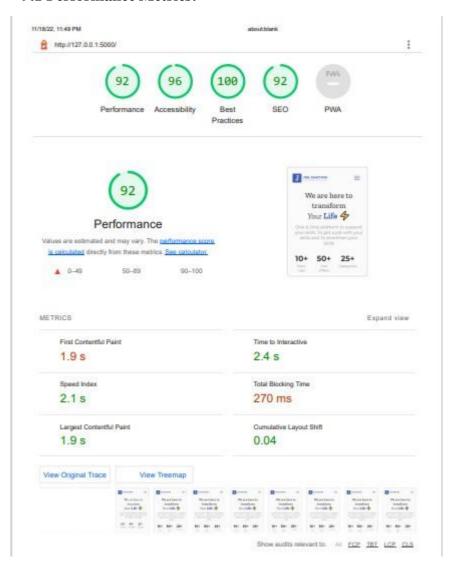

# **8.2** User Acceptance Testing

We performed this User journey mapping before starting development of our project. We did this with our end users (students of our college). Based on the observations, we did this application.

#### 9. RESULTS

#### **9.1 Performance Metrics:**

# 10. ADVANTAGES & DISADVANTAGES

# 10.1 Advantages:

- 1. Right job/skill recommendations based on their interest, skill level, and expertise in a particular domain.
- 2. Achieving a Win-Win policy for both job seekers and providers.

### 10.2 Disadvantages:

- 1. Time consuming process.
- 2. Tedious process.

#### 11.CONCLUSION

We did our best to our capacity. We did each and every process and task after learning. We actually started it from scratch and come to this level. We learned Project planning and execution along with the development languages like HTML, CSS, Bootstrap, Flask, IBM cloud DB2, Docker, and so on. We are actually planning to take this project idea for our start-up. The above-produced documents are all done by us. Yet to improvise and complete a lot with this project. We strongly believe this idea will great impact on people's life.

#### 12.FUTURE SCOPE

We found the core problem among job seekers which we mentioned in the above existing problem section. Now, we are trying to solve it by simply finding users' skill levels in a more human-centered way and recommending jobs based on their category at all levels. We believed that this idea can be scalable. Because once we achieve/find an implementation approach to our above-mentioned primary task then,

- 1. It can be expandable by providing offline support along with online.
- 2. End-to-end support for skills identification, enhancement, job support, and more.
